**Principles of Operation**

The AR700 is a triangulation sensor that measures distance by projecting a beam of laser light that creates a spot on a target surface. Reflected light from the surface is viewed from an angle by a CMOS detector array inside the AR700 sensor. The target's distance is calculated from the image pixel data using the sensor's microprocessor. The distance is transmitted through serial communications or analog outputs. A variety of models are specified, each to allow a different measurement range.

**Definitions**

Span: Working distance between measurement endpoints over which the sensor will reliably measure displacement

Standoff: Offset distance from the face of the sensor to the middle of the span. Accuracy is greatest at the standoff distance and the laser spot size is smallest at this focal point. AR700 standoff location tolerance is +/-0.25mm.

Linearity: The largest deviation from a best-fit straight line over the measurement range, created by data from the sensor with reference taken from a true distance scale. Stated as +/-% of the Span.

Resolution: Smallest increment of change in distance that a sensor can detect. Stated as % of the Span.

Sample Rate: Speed that data samples are obtained from the sensor.

Complies with 21 CFR 1040 with Laser Notice #50 and IEC/EN 60825-1:2001

**Laser type**

650 nm, 1 mW visible RED

670 nm, 5 mW visible RED

OPTIONAL 660 nm, 20 mW visible RED (Class 3B)

**Power**

15 - 24 Volts DC, 120 – 200 mA draw with 350 mA surge at power-up, Voltage tolerance -5% to +10%

**Sample rates**

0.2 – 9400 Hz, or sample trigger (serial command or analog)

**Operating Temp**

0 - 40°C (32 - 104°F)

**Storage Temp**

0 - 60°C (32 - 140°F)

**Environmental**

Compliant with the RoHS directive regarding the reduction of the use of lead and other hazardous substances.

**Outputs**

| serial | RS232 full duplex, RS422 unterminated and terminated |
| analog | 4-20 mA o r 0–10 V; two limit switches (NPN, 100 mA sinking) |

**Cable**

length: 6 ft. (1.8 m), diameter: 0.26” (6.6 mm), weight: 5.8 oz. (165 g), 12 conductor, Polyurethane sheathing

Red – power 15-24 VDC

Pink – Limit 1, NPN

Yellow – RoD(RS232), Rx- (RS422)

Black – Ground

Green – TxD (RS232), TX- (RS422)

White – laser disable

Orange – current loop / voltage out

Blue – RTx (RS232), TX+ (RS422)

Clear – Shield

Brown – current loop / voltage return

Violet – CTx (RS232), RX+ (RS422)

* with optional 660 nm, 20 mW visible red laser diode (Class 3B). Standard 5 mW diode results in higher linealities.
Mechanical Dimensions

units in inches [mm]. Tolerances: .XXX = +/- 0.010 [0.3]; .XX = +/- 0.020 [0.5]

AR700 Sensor Options

Connectivity kit: Includes terminal blocks, serial cable with molded DB9 connector, AC power supply with 110 VAC or 240 VAC

High power lasers: Diode upgrades to visible red 20 mW (660 nm, Class 3B) for high sample rates on dark surfaces or in high ambient light.

Bandpass Filter: Internally-installed. Suggested for outdoor applications and when measuring to bright or radiating targets.

Road profiling option: Package for AR700-6 or -8. Includes specialized optics, upgraded diode, bandpass filter and signal processing firmware optimized for use in high-speed longitudinal road surface profiling.

Touch Panel Display: Controller and display for Acuity laser sensors. Includes TFT touch display for simple configuration. Calculates material thicknesses using dual laser sensors. Eliminate the need for a PC and costly software development!

Cables: Optional 7m cable. Contact us for custom cabling needs.

Interface Selection

The AR700 has many configurations that can be set directly using the sensor’s built-in Function button and corresponding LED’s. External controllers are not required to change settings! Manipulation of the PARAMETER and SETTING functions allow users to configure sampling rates, output formats, zero and span points, baud rates, optional exposure limits and limit switches. See the User’s Manual for more information.
